Free full version for Windows x64

Four free fields. The file name you actually need.

Queen		**1975**	

Queen-1975.mp3

Four fields, directly accessible

Open at the top, select one file or several and rename them one by one. Each row has its own fields and preview.

Your separator

Hyphen, underscore or custom separator text, optionally with spaces on either side. Empty fields and their separators disappear.

Check duplicates selectively

Compare contents and recordings across subfolders. Similar names alone never enable cleanup.

Stay in control

Naming conflicts are blocked. Batch renaming can be undone; the built-in recycle bin supports restoration.

Your preferred appearance

Eight languages, vivid biker colour schemes and Pearl & Petrol as the final colour option. Free, without a time limit.

No guarantee for every altered recording. Renaming preserves folders and file extensions; it does not convert formats.
