FLYER

# File Multi-Tool

DMT-3.0.0-R1-ID1F · Windows x64 · Free full version

### Check duplicates

Find possible duplicate files and review matches before acting.

### Four filename fields

Build names with your own separators and check the preview.

### Work with batches

Rename or move selected files in one operation.

### Track changes

Review file actions in the log and undo supported operations.

# Four free fields. The file name you actually need.

| | | | |
|---|---|---|---|
| **Queen** | | **1975** | |

## Queen-1975.mp3

### Four fields, directly accessible

Open at the top, select one file or several and rename them one by one. Each row has its own fields and preview.

### Your separator

Hyphen, underscore or custom separator text, optionally with spaces on either side. Empty fields and their separators disappear.

### Check duplicates selectively

Compare contents and recordings across subfolders. Similar names alone never enable cleanup.

### Stay in control

Naming conflicts are blocked. Batch renaming can be undone; the built-in recycle bin supports restoration.

### Your preferred appearance

Eight languages, vivid biker colour schemes and Pearl & Petrol as the final colour option. Free, without a time limit.

No guarantee for every altered recording. Renaming preserves folders and file extensions; it does not convert formats.
