Bangert-Software · Musikregal
VMW-3.0.0-R1-ID70F · Windows x64

Four windows. Your setup.

Musikregal for Windows connects local tracks with your CD and vinyl collection. Search by artist, title or album, build the queue and keep the next track in sight.

Choose your edition

Light offers the player and track list in up to two windows. Standard combines the player and track list and adds a separate EQ. Professional gives the player, EQ, library and queue up to four freely positioned windows.

Mix with the A/B crossfader

Green shows that the next track is ready. Drag the crossfader or click Crossfade now. The fader follows the transition in either direction. The next three tracks appear underneath.

Log a request in one click

Choose Request +1 beside a track to record a request. The ranking lists the most requested tracks.

Music directly from your sources

Local music remains independent and usable offline. Each source has a saved on/off choice. Optional OneDrive: fixed root folder Musikregal, individual readable sharing link and Check connection. NAS and PC/server shares must be reachable.

Try it for 45 days

The public Demo45 starts in Professional. Use Try an edition to explore the three player views within a single trial. Music and the queue continue when you switch. Information and demo at b-termine.de. New public: choose language; new private: German without a prompt. Updates retain language and actual folder.

Volume and output level

Meter always visible: full width when closed; when open, slider left and meter right, 50% each. Narrow windows use a reserved second row. Timeline, playback buttons and A/B crossfader stay fixed. The percentage is centred below the slider in 0.5-point steps: green through 75%, orange at 75.5–90%, red from 90.5%. Metering continues during playback, with a 0.5-second peak hold.
