Single albums to box sets

Record single, double and multi-disc albums and box sets with media counts and their track lists.

An unambiguous location

Compartment and media numbers match your labels. They stay separate from album size and track numbers.

Search compilations too

Songs and their artists lead you to the album. Find a title even on a compilation.

Details when you need them

EAN, label, release year, genre and other available information appear in the details. Search stays clear.

Your data stays yours

Use your saved collection locally. Backup and restore preserve the full collection.

VM · SEARCH AND SUGGESTIONS

Search the way you think.

Song, artist and album have separate fields. Combine search terms with media type, genre or year.

Complete matching names

Faint suggestions come only from your existing collection. Accept them with Tab, Enter or a field change.

Genres grouped by category

From rock and Krautrock to jazz: narrow down genre and style, then combine media type and release years.

Speak and hear the location

Enter a title or artist by voice; hear the compartment and media number. Available voice services depend on your device.

Keep things clear

Key information and a new search come first. Editing, statistics and settings are accessible through submenus.

Example: all CDs and LPs by CCR

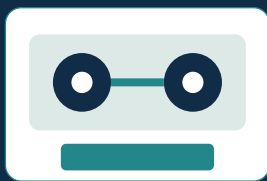

Choose the artist and media types. View the same selection or export just those items.

VM · AUDIO CASSETTES AND REEL-TO-REEL TAPES

Find the start of the right song.

For cassette decks and reel-to-reel recorders, save counter readings at song starts - exactly as you read them on your device.

cm/s

Start counter reading per song

Enter a start counter reading for each song on an MC or TB item. Your readings stay with the title.

Visible only when needed

Enable or disable MC and TB counter fields separately in the service menu. Hiding them preserves saved values.

The right tape speed

For TB, choose 4.75, 9.5, 19.05 or 38.1 cm/s. You can also enter your own value within this range.

Visible in search results too

The recorded TB speed appears in result details. Tape speed selection is shown only for reel-to-reel tapes.

For the players you already own

Musikregal manages the information. Listen on your cassette deck, reel-to-reel recorder or other devices.

Order that fits your shelves.

The default is always compartment number, then media number - sorted numerically. Choose your own criteria for other lists.

COMPARTMENT → MEDIA NUMBER · VIEW = EXPORT = PRINT

Shelf	Media no.	Artist	Title
1	1	CCR	Cosmo's Factory
1	2	10cc	How Dare You!
2	1	Phil Collins	Face Value
1 → 2 → 3 · 2 / 3 / 4 / ...			

Your permanent default

Compartment 1 with items 1, 2, 3 ... then compartment 2. One click restores this permanent default order.

Combine several criteria

Use any of the 15 list columns for sorting. Combine two, three, four or more criteria with priority and direction.

Keep the same order

The selected sort order applies to the view, filtered export and Windows printout. Lists match what you see on screen.

Your own print and PDF header

Two logos and four formattable header lines; bordered rows and a repeated page header. Compartment and media numbers come first.

Lists for checks and favourite music

Check your collection by storage location or sort by artist, title and other details - return to the default at any time.

VM · EXPORT, BACKUP AND DISCOGS

You decide what happens to your data.

Share a selected set, back up the full collection or compare details with a locally imported Discogs catalogue.

1**Export a selected set**

Search and filters select the media. Export CSV for spreadsheets or JSON; keep the sort order and preview.

2**Back up the full collection**

A full backup preserves your collection and its related details. A filtered partial export does not replace this backup.

3**Compare Discogs details**

Compare with a locally imported Discogs catalogue. Choose Keep or Replace for fields that differ.

4**Confirm changes deliberately**

Keep is selected by default. Values change only after you confirm your choice; existing details are not changed without asking.

Control over every change

Discogs is used here as a locally imported catalogue. This beta does not include automatic online retrieval.

VM · YOUR PERSONAL MUSIKREGAL

Plenty inside. Easy to try.

A collection overview, statistics and personal appearance settings complement search. Sample collections help you get started with the beta.
